

I claim:

1. A fragrance generation device for information products, comprising:
  - a device giving out heat and disposed inside an information product;
  - a heat-radiating sheet stacked upon said device giving out heat;
  - 5 a heat-radiating fan with a disk body disposed thereon, corresponding clamping arms being formed at two sides of said heat-radiating fan, said clamping arms being used to firmly clamp two sides of said heat-radiating sheet; and
  - a fragrance sheet received inside said disk body;
  - 10 whereby a fragrance is emitted through activity of said heat-radiating fan inside said information product.
2. The fragrance generation device for information products as claimed in claim 1, wherein said information product is an electric article like a computer, a personal digital assistant or an electric appliance.
- 15 3. The fragrance generation device for information products as claimed in claim 1, wherein said fragrance sheet is a sponge.
4. The fragrance generation device for information products as claimed in claim 1, wherein said fragrance sheet is replaceable.
